**Variable-air-volume.** *See* Air handling systems, by type

**Variable-area flowmeters** **1235–1236**

**Variable-flow pumping.** *See* Pumping, variable-flow

**Variable-pitch fans.** *See* Fans: variable-pitch

**Variable-pulley drives.** *See* Drives, variable-pulley

**Variable-speed drives.** *See* Drives, variable-speed. *See also* Drives, direct current (DC); Drives, multiple-motor; Drives, variable-frequency; Drives, variable-pulley; Motors, AC induction: multi-speed; Motors, wound-rotor

**Variable-voltage input (VVI)**

**drives.** *See* Drives, variable-frequency

**VAV (variable air volume).** *See* Air handling systems, by type

**VAV terminals, fan-powered.** *See* Fan-powered VAV terminals

**Veiling reflections.** *See* Lighting, design issues: veiling reflections

**Velocity pressure**

definition 1234

in flow measurement 1234

of wind 1383

**Venetian blinds.** *See*

Daylighting; Shading, to reduce cooling load

**Ventilation, of attics** **957–960**

energy saving 958

how to control 960

how to guide the air flow 958–959

how to move the air 959–960

where to improve 957–958

**Ventilation, of pipe tunnels** **216–217**

**Ventilation, outside air.** *See also* Air handling systems, by type

& building penetrations. *See* Air

handling systems: envelope

penetrations, improve

& building pressurization. *See*

Pressure, building

ability of air handling system to

health issues 521

how to measure 524–525

in dual-duct systems 649

in VAV systems 619–

620, 622, 625

optimize **519–526**

reduce, by air cleaning **539–546**

energy saving 539–540

fan pressure requirement 545

hazards 545

in VAV systems 621

methods 540–544

where to install equipment 544–545

with adsorbents 541

with chemical filters 541–542

with electrostatic filters 542

with HEPA filters 540–541

with ultraviolet filters 542–544

reduce, by improving HVAC

equipment 545

reduce, by installing hoods 545–546

reduce, by reducing interior emis-

sions 545

reduce during unoccupied periods

**527–529**

standards for 521

**Venturi flowmeters** **1235**

**Vermiculite** 1388. *See* Insulation, types: vermiculite

**Vestibules** **820–822**

& door operators 812–813

heating of 821–822

layout 821

quick-acting doors for 840

where to consider 820–821

**VFD.** *See* Drives, variable-frequency

**Vision, human.** *See also* Daylighting, design issues; Lighting, design issues

adaptation to brightness 1410, 1429

color 1434. *See also* Lighting,

design issues: color rendering

defects 1435

loss, in dim light 1435

color vision defects 1435

**Voltage stress, in motors** 1361

**Volute, pump** 1339

**von Karman vortices** 1234

**Vortex shedding flowmeters** 1234

**VVI (variable voltage input)**

**drives.** *See* Drives, variable-frequency

**W****Wall washers (lighting)**

eliminate unnecessary 1132  
replace with direct lighting 1136–1138  
replace with reflective surfaces 1116

**Wash basins**

confused with urinals 444  
efficient fixtures, install **443–445**  
for private use 443  
for public use 443–444  
stoppers, maintenance **441**

**Waste heat**

as heat source for heat pumps 787, **1264**

**Waste product combustion 1280**

applications 1280
